

Evidence Register

Purpose

This register serves as the authoritative catalog of evidence contained within the Gildmark portfolio.

Each entry represents a concrete artifact produced during the conception, design, implementation, or governance of the platform. Rather than cataloging capabilities directly, the register catalogs the evidence from which those capabilities can be legitimately inferred.

Every significant claim made within this portfolio—including résumé statements, interview talking points, architectural essays, and technical narratives—should trace back to one or more artifacts documented here.

The objective is to ensure that the portfolio remains evidence-driven rather than assertion-driven.

Evidence Classification

Strength	Definition
Exceptional	Demonstrates capability rarely documented or executed at an individual contributor level. Represents a distinguishing strength.
Strong	Clearly demonstrates professional capability beyond routine implementation.
Supporting	Reinforces capabilities demonstrated elsewhere.
Planned	Intended portfolio artifact not yet produced.

Evidence Register

Artifact	Capabilities Demonstrated	Distinguishing Value	Strength	Portfolio Destination	Status
High-Level Build Plan	Enterprise Architecture; Systems Thinking; Technical Leadership; Strategic Planning	Demonstrates the ability to decompose a complex enterprise platform into governed implementation phases through explicit dependency management, phased execution, architectural sequencing, and conscious deferral rather than feature-centric planning.	Exceptional	Engineering Process	Complete
Architectural Decision Register	Architectural Governance; Technical Leadership; Decision Traceability; Long-Term Architectural Thinking	Demonstrates disciplined architectural decision making through explicit documentation, rationale, trade-off analysis, and long-term governance across the platform.	Exceptional	Engineering Process	Complete
Endpoint Inventory	API-First Design; Platform Architecture; Integration Architecture	Demonstrates platform-scale API design, explicit endpoint governance, external contract discipline, and architectural consistency across the service surface.	Exceptional	System Architecture	Complete

Artifact	Capabilities Demonstrated	Distinguishing Value	Strength	Portfolio Destination	Status
Domain Intelligence Sessions	Domain Modeling; Business Analysis; Requirements Engineering	Demonstrates structured domain exploration and decision making before implementation, emphasizing business understanding over feature development.	Exceptional	Representative Services	Complete
Engineering Handoff	Engineering Discipline; Technical Leadership; Delivery Governance	Demonstrates production-quality engineering governance, project continuity, operational maturity, and maintainability.	Exceptional	Engineering Process	Complete
Technical Debt Register	Engineering Discipline; Risk Management	Demonstrates deliberate management of technical debt, prioritization, and continuous architectural stewardship.	Strong	Engineering Process	Complete
CLAUDE.md	AI-Assisted Engineering; Engineering Standards; AI Governance	Demonstrates an intentional methodology for AI collaboration through architectural guardrails, engineering conventions, and disciplined human oversight.	Exceptional	AI Collaboration	Complete

Artifact	Capabilities Demonstrated	Distinguishing Value	Strength	Portfolio Destination	Status
Platform Positioning	Product Strategy; Product Architecture	Demonstrates strategic thinking around category definition, market positioning, and architectural differentiation.	Strong	Architecture Thesis	Complete
Portfolio Overview	Executive Communication; Technical Communication	Establishes the architectural narrative and evaluation framework for the portfolio as a whole.	Strong	Executive Summary	Complete
Architectural Essays	Technical Communication; Thought Leadership	Demonstrates the ability to articulate architectural philosophy and engineering judgment through long-form technical writing.	Planned	Architectural Essays	Planned
